PLEASE NOTE.
This catalog has no index other than the above. We have carefully rearranged the names of all our Trees, Shrubs, and Plants under Headings that will enable the reader to turn very quickly to any item. Common names are used.

PLANT YOUR TREES PROPERLY

This illustrates a Fruit Tree properly planted. Note the size and shape of hole and spread of roots at convex bottom. In a general way, observe the following. Dig holes at least 2 1/2 ft. wide by 2 ft. deep. Fill in with loose moist top-soil and press well below and around roots. Plant no deeper than tree stood in Nursery. Do not cut to less than 30 inches in height. Leave some laterals where possible. Caution! Never let roots get dry.

EVERGREEN TREES

An Evergreen Tree properly planted. Dig hole as for a Fruit Tree; ball unbroken and fine earth pressed firmly below and around ball. Fill in of coarser earth and mulch of old manure in Basin.
Remember. On receiving trees, open bale at once, cut open bunches, and spread roots in shallow trench; cover with sand or fine earth, and if weather is dry, soak the ground well.

If any trees should appear dry they may be soaked, root and top, in a trough all night.

While planting, keep roots moist by leaving them in a barrel half full of water or by "puddling" before taking to the field. This means to dip the roots into a hole previously prepared so that it is full of mud of the consistency of stiff paint; this will keep roots from drying quickly.

Shading. Shade the trunks with tree protectors or with burlap or paper; this is very important, as it prevents sunburn.

Shipping. Give plain directions as to route, and whether by freight or express. We recommend express for all except large shipments.

Parcels Post. When there is any saving to our customers we ship small packages by parcel post, if possible, postage and packing extra being charged.

Responsibility. We cannot be held liable for any damage that may result from delays in transportation or through the inability of the horticultural officers to make prompt inspection.

Orders. We aim to fill orders in rotation as received, and will always endeavor to use the utmost promptness.

Substitutions. Always state, in a mixed order, if any substitutions may be made or not. If "no substitution" is written on order, such instructions will be carefully heeded.

Complaints. All claims for shortage, or any other possible mistakes, must be made within two days after receipt of stock or they cannot be allowed. Carefully examine trees or plants upon arrival. If anything is wrong, notify us at once; adjustments, if any are needed, are made at this time.

Guarantee of Genuineness. While every care is taken to sell stock true to name and description, mistakes may sometimes occur, in which case, on proper proof being presented, we shall be ready to refund the amount paid or will replace such trees or other stock.

It is mutually understood and agreed to between purchaser and ourselves that such guarantee of genuineness shall in no case make us liable for any sum greater than the original amount paid for any stock that may prove to be untrue. If this is not agreed to by purchaser, trees or plants must be returned at once.

Packing. This is done in the best manner, and charges made simply to cover cost of material used. No charge for cartage to railroad.

The charge per bale would amount to about 25¢ to $2.50, according to size, and for ornamental stock, from 25¢ to $1.50 per box. Small plants in flats, 15¢ each flat.

If any trees or plants are not satisfactory when received they must be returned, properly packed, within two days after they are received, as no claim on any account whatever will be allowed otherwise.
FRUIT TREE NOTES

APPLES

The list comprises well-known and tried favorites, which may always be relied upon. We have a limited number of new and less known sorts, which we should be pleased to present with apple orders for trial, so far as the stock goes.

ALMONDS

We still propagate Lewelling in considerable quantity, simply because "it pays." This variety is the heaviest regular bearer of any. "Improved I. X. L." is a wonder, for size, appearance, quality, and bearing. Plant several varieties, the bees will do the rest.

APRICOTS

Blenheim (Payne improved), Royal, Hemskirke (Flickinger) are the three most reliable commercial varieties. For the family orchard add one each of the others.

CHERRIES

Chapman, Tartarian, Royal Ann, Bing, Paul, are the best market sorts. For the family orchard a much larger assortment is desirable.

PEACHES

We grow a very superior assortment of varieties noted for their fine quality. Plant one of every kind, if you have room; it means ripe peaches daily from June to late October.

PEARS

No finer assortment in the U. S. For the small lot, many choice sorts may be had on quince root, which makes a smaller tree, precocious in bearing.

PLUMS

To appreciate the plum in a family orchard, a tree of as many as possible of our list should be used. The season extends for a full five months.

PRUNES

Our "Coates French Prunes" are standardized, which means much to the planter. This has been brought about by many years of patient and careful study and investigation. Full description is given on separate leaflet.

PRUNING

The University of California College of Agriculture is demonstrating a different method of pruning orchard trees. "Moderation" seems to be the key word, added to a selection at the start of three limbs to form the tree, all other growth eliminated as it starts, to give all the strength to these. Write to College of Agriculture, Berkeley, for full details.

Varieties of Fruit named as nearly as possible in order of ripening:
THE demand for our largest prune—COATES FRENCH 1418—has been so great that all but a few were sold before this Catalog was ready to mail. We will sell the balance at the rate of two trees to a customer, to enable those who have none to try them out, if they wish to do so. We have commenced booking orders for 1920-21.

Use ORONITE for Covering Tree Wounds, Inexpensive and Efficient. We Sell It
ORNAMENTAL DEPARTMENT

Please Note

That we grow our own stock, and keep a large assortment of evergreen and flowering trees and shrubs in large tubs, boxes, or 5-gal. cans, so that they may be transplanted at any time in the year. By this method, instead of “balling” a tree from the open ground, when the roots must be cut heavily, the planter gets a tree with roots undisturbed, growth proceeding as well as though the tree had not been removed.

We do not hesitate to say that there is no finer or healthier stock grown in the state, nor a more varied and useful assortment. Visitors express themselves as “amazed” when they see it.

We submit this condensed and classified list, arranged in a simple form, so that a selection may easily be made for any special purpose.

THIS WILL BE THE SEASON FOR ORNAMENTAL PLANTING

For several years, owing to war conditions, and the patriotic necessity for spending money only on essentials, owners of land and of town lots confined their plantings to fruit trees, berries, and vegetables.

The conditions have changed. Crops and prices are good, and most people have money to spend.

DON'T FORGET

that besides the satisfaction in having the home place beautified with trees and shrubs, it greatly enhances the value of any property to make such a planting.

COME AND SEE

our fine assortment of shrubs, plants and trees, and make your selection now.

ROSES

Roses thrive best in a rather heavy, moist soil, and require good and frequent watering in the summer. After the first year, plenty of manure should be used on or near the surface, not about the roots. Prune heavily every year, keeping the old wood cut out, and shortening what is left. Our Roses are on their own roots in most cases. No trouble from wild root suckers. The following list comprises the best in all colors and habits for California. Prices are for strictly No. 1 stock:

“We Grow Everything Worth While”
As helpful to those of our customers who are not familiar with the names and habits of certain shrubs, trees and vines to produce a given effect, we submit the following lists, with some suggestions. We purposely omit many really tender plants which, while they may grow well in Southern California for years, will in time be hurt by frost.

### EVERGREEN SHRUBS

(a) Berried effects; tall.

Some of these are not truly evergreen, but become practically so in California.
